Professional Summary

Product-oriented **Full-Stack Engineer** who turns **ambiguous requirements** into **production-ready web systems**. Strong in **MVP scoping**, **rapid iteration**, and **end-to-end delivery (spec → build → deploy)**, with experience supporting **real-time dashboards**, **high-load data workflows**, and scalable internal tooling.

Skills

TypeScript/JavaScript | **React, Vue** | **Python, Django** | **REST APIs** | **MySQL, MariaDB** | **Redis** | **Socket.io** | **AWS, Oracle, Linux** | **Nginx** | **Git, CI/CD** | **Cypress** | **Docker** | **Frappe (ERP customization)** |

Work Experiences

FRONTECH SOLUTION | **Full Stack (Acting Technical Lead)** | Sep 2023 - PRESENT | EDMONTON, AB

Technical lead for execution of web-based internal tools and enterprise workflows, delivering scalable systems from **ambiguous requirements** to stable **production releases** across client environments.

- Established **technical scope** and delivery strategy under evolving requirements, converting stakeholder objectives into **executable engineering plans**.
- Designed **system architecture** and **technical standards** for ERP customization and automation modules, including data modeling, workflow orchestration, and deployment strategy decisions.
- Built and deployed a **real-time monitoring dashboard (Socket.io)** enabling live production data visualization with **sub-second latency** and interactive pipeline control.
- Extended the **Frappe framework at system level**, optimizing internal data workflows, report rendering, and high-load processing performance.
- Integrated third-party systems (e.g., **QuickBooks API**) using **OAuth2 authentication**, implementing secure data mapping and synchronization logic.
- Led **sprint execution** and cross-functional technical coordination across a small engineering team, owning **code quality standards** and release validation processes.
- Managed **multi-environment deployments (dev/test/stage/live)**, implementing release workflows that improved **production stability and deployment** consistency across client systems.
- Delivered integrated **e-commerce and warehouse automation workflows**, contributing to a measurable **20–25% increase in client sales performance**.

MEDIA SHAKER | **Full Stack (Internship)** |

May 2023 - Aug 2023 | EDMONTON, AB

- Built and shipped web features for an internal management platform using **React + RESTful APIs**, implementing secure frontend-backend integrations with **MySQL** to improve data consistency, reliability, and scalable feature expansion.

NSTEP Organization | **Full Stack (Internship)** |

Sep 2022 - Dec 2022 | EDMONTON, AB

- Built end-to-end web functionality using **Django REST Framework** and **React** to support questionnaire submissions, media recording, and structured user data workflows.

Education

UNIVERSITY OF ALBERTA | **B.Sc. in Computer Science**

Sep 2018 – Dec 2022
